

DREAMBOX LEARNING MATH ADVANCED:

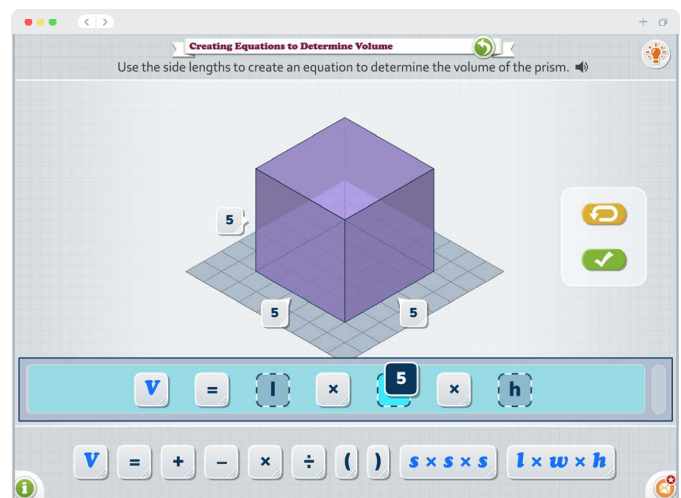

Launchpad: DreamBox Math's fast and engaging baseline assessment

ENHANCE YOUR ORGANIZATION'S ABILITY TO MONITOR STUDENT PROGRESS AND MEASURE GROWTH.

Launchpad, an engaging, in-platform assessment, gives educators an accurate baseline of student understanding and places students in the DreamBox Math curriculum. With Launchpad, educators know each student's math strengths in less than one hour.

How it works

Similar to DreamBox Math lessons, Launchpad adapts to each student's strengths and struggles in real time. Yet different from DreamBox Math lessons, Launchpad doesn't offer scaffolding or hints beyond specific instructions for how to use the program's tools or manipulatives. After an administrator enables Launchpad, most students complete the experience in 15 – 45 minutes. If necessary, students can pause and restart Launchpad without losing progress. Once completed, Launchpad determines their strengths and places them on an adaptive path for learning within each domain.

Sample Launchpad adaptive lesson: Determining volume.

Launchpad is:

- ✓ **Engaging and fun:** The adaptive experience uses the same approach as DreamBox Math interactive lessons to assess student thinking.
- ✓ **Efficient:** In less than one hour, the assessment helps educators quickly identify students who are below, near, or above grade level.
- ✓ **Seamless:** Launchpad integrates with the DreamBox curriculum and then picks up exactly where students need support.
- ✓ **Actionable:** Monitor growth daily with Launchpad's established baseline as a starting point for state standards.
- ✓ **Optional:** Administrators can customize their Launchpad implementation to align with their district needs.
- ✓ **Additive:** Launchpad can complement existing standalone assessments.

Launchpad is available within DreamBox Learning Math Advanced. To learn more about this feature and other DreamBox Math offerings, [request a demo](#).
